

Amendments to the Specification:

The paragraph starting at page 4, line 16, is amended and now reads as follows:

-- The outer support bell 16-II, which is shown in FIG. 2, likewise includes a throat region ~~18-I~~ 18-II. Here, the cover 6-II also joins as one piece. The assigned clamp ring 12-II is disposed on the inner side of the rolling-lobe flexible member for providing a pressure-tight attachment of the upper end of the rolling-lobe flexible member. This clamping ring 12-II functions only for support; whereas, the throat region 18-II of the support bell 16-II assumes the actual clamping function in that it deforms for clamping. --
